Dear Mr. Terry:

We have reviewed your Notice of Intent for exploration activity in SLB&M T42S R18W Sec 30. The Notice is dated July 14, 1990 and was received in this office on July 19, 1990. Field inspections and office reviews indicate that your proposed activity would not disturb any threatened or endangered species or impact any surface cultural artifacts. Please inform us within 15 days after reclamation of this activity that we may inspect it for compliance with the 43 CFR 3809.1-3(d) regulations.

Your proposed activity is in substantially the same area as disturbance covered under a previous Notice which has not yet been reclaimed. Regulations require that reclamation of a previous Notice be completed before work under a subsequent Notice is performed. We have discussed this situation with you and request that you submit a reclamation plan for the work that you are responsible for on the Dixie Resource Area. In this plan, please show on a topographic map all disturbance that you have caused during exploration activities including reclamation, new roads, maintenance of existing roads, drill pads, trenches, and side cuts. Indicate those areas that in your opinion must be left open for future access and mineral discovery. Also include a time schedule identifying when you plan to complete the reclamation and a description of how you will accomplish the work.

Please have this reclamation plan to us by September 15, 1990. Failure to submit an acceptable reclamation plan by that date may result in a letter of noncompliance requiring that any future work be bonded pending resolution of the noncompliance.

If you have questions, please contact Kim Leany of this office.

Sincerely,

!s/Debbie J. Pietrzak!

Debbie J. Pietrzak
Area Manager
